Image Source[/caption] AutoCAD is designed to be used by architects, engineers, drafters, and mechanical and electrical drafters. It features parametric drawing, advanced functions for 2D and 3D drafting, BIM (building information modeling) capabilities, and the ability to animate various drawing objects such as lines, arcs, circles, and splines. It also features a parametric equation editor, allowing users to create equations to calculate a set of parameters such as lengths, angles, and areas. Image Source[/caption] AutoCAD is capable of turning a flat piece of paper into three-dimensional objects by applying dimension lines, aligning them, and drawing their intersections. These lines make it possible to display any shape as a solid object. [caption id="attachment_346" align="aligncenter"

Link to Autodesk Exchange Apps Autodesk Exchange Apps are available for download to any user. These Apps are built with AutoCAD, and are designed to offer user interfaces for customizing AutoCAD functions. Autodesk Exchange Apps are typically available as add-ons to be downloaded to a user's AutoCAD. These add-ons run in addition to the native AutoCAD application and are typically accessed by selecting "Tools", and "Add-ins" Once an app is installed, it can be activated or deactivated on-the-fly, and is automatically loaded on launch. The Add-in can be moved to the Dock or it can be opened from the menu. Once the add-in is activated, it has access to all the normal features of AutoCAD. When an add-in is deactivated, it is removed from AutoCAD and can be activated/deactivated on the fly. This allows the user to get an app's functionality whenever they need it. Most add-ins are licensed based on the number of users, and some will support multiple users at once. Since these are 3rd party applications, their functionality can be changed and upgraded at any time. Once a user has a

number of Autodesk Exchange Apps installed, their native AutoCAD application (built-in or downloaded from the Application Store) will be the standard user interface. They can then use any of the available Apps from any platform (Mac, Windows, Linux, etc) at any time. See also List of CAD software Autodesk's Application Store References External links

Evaluation of prognostic factors and subgroups of patients with advanced colorectal cancer treated with adjuvant chemotherapy using the protocol for advanced colorectal cancer by the Colorectal Study Group of the Japan Clinical Oncology Group (JCOG). Although the number of patients with advanced colorectal cancer in Japan is estimated to be approximately 50,000, no studies have examined the significance of various clinicopathologic factors and various chemotherapy regimens. The objective of this study was to determine the importance of a variety of clinicopathologic factors and chemotherapeutic regimens in patients with stage III colon cancer. A retrospective analysis was performed in 82 patients with stage III colon cancer
