## **XPIPcfg Crack Download (Latest)**

XPIPcfg is a very basic Windows software solution that shows the system IP configuration and lets you perform simple operations. With an unprofessional-looking interface, XPIPcfg shows the current IP address and displays all available tools in the same window, which means that you shouldn't spend too much time trying to figure out which feature is which. First of all, XPIPcfg allows you to release the DHCP IP address of your system, while a renew button is also available to receive another IP address from the DHCP server in your network DNS utilities are available too, so you can either see the DNS settings or simple purge the cached data. If network information is all you're looking for, just click on the "Show All" button and XPIPcfg displays the current configuration, including IP addresses and DNS servers. XPIPcfg is aimed at Windows XP users and it doesn't even launch on Windows 7. As you can see, it lacks a lot of important features, starting with an IP configuration tool and ending with an user-friendly interface that could make everything a lot easier for both beginners and those with a bit more experience. All things considered, XPIPcfg is nothing more than an interesting project that doesn't represent a handy software solution anymore. It can only be used on Windows XP workstations and although it does show some important network details, the market is already full of similar apps doing a lot more than that. XPIPcfg Review by QuizMoz Rating: 9/10 XPIPcfg is a very basic Windows software solution that shows the system IP configuration and lets you perform simple operations. With an unprofessional-looking interface, XPIPcfg shows the current IP address and displays all available tools in the same window, which means that you shouldn't spend too much time trying to figure out which feature is which. First of all, XPIPcfg allows you to release the DHCP IP address of your system, while a renew button is also available to receive another IP address from the DHCP server in your network DNS utilities are available too, so you can either see the DNS settings or simple purge the cached data. If network information is all you're looking for, just click on the "Show All" button and XPIPcfg displays the current configuration, including IP addresses and DNS servers. XPIP

## **XPIPcfg Crack With License Key X64**

Display Windows-IP configuration of computer in a convenient way. On the side shows some useful information. Can define IP addresses and DNS server addresses, as well as release and renew IP addresses. Main interface is simple, that allows you to modify your IP configuration. When the IP configuration is changed, the program executes a script that renames IP configuration file. XPIPcfg - Windows XP IP address and DNS server utility - is a very basic Windows software solution that shows the system IP configuration and lets you perform simple operations. With an unprofessional-looking interface, XPIPcfg shows the current IP address and displays all available tools in the same window, which means that you shouldn't spend too much time trying to figure out which feature is which. First of all, XPIPcfg allows you to release the DHCP IP address of your system, while a renew button is also available to receive another IP address from the DHCP server in your network DNS utilities are available too, so you can either see the DNS settings or simple purge the cached data.
