#### What's New in the RhythmScreen?

What does RhythmScreen do? RhythmScreen is an application for Mac OS X. The idea behind it is to take continuous screenshots. How it works? You select the cadence in which you want to take the screenshots. Once the cadence is set, you can take screenshots as

---

many times as you want. RhythmScreen has two settings "Auto" and "Self-Stop". If you set the cadence to "Auto", RhythmScreen will take the screenshots for you. If you select "Self-Stop", it will not take any screenshots until you click on the icon again. In other words, if the application is not active, it won't be running. What is the difference between "Auto" and "Self-Stop"? "Auto": It will take the screenshots when the application is inactive. Once the application is active, it will stop. "Self-Stop": It will stop taking screenshots until you click on the icon again. Installation: Install the.pkg (or.dmg) file that you downloaded into the Applications folder Open RhythmScreen and select the setting "Self-Stop" Uninstall RhythmScreen if you are not using it Optionally, it is recommended that you configure your system-wide keyboard shortcut to open RhythmScreen Instructions: Open
