Hard Drive Upgrader is a lightweight utility which makes it possible to convert the current hard drive into a new one without any need of formatting the original disk or changing the original partition table. The Hard Drive Upgrader makes use of available free space on the source disk to copy data from the existing drive to a new one. Thus the user is spared the trouble and time of reformatting. The Hard Drive Upgrader is easy to use, since it simply runs as a standard Windows application, and does not require special computer skills. The problem is that one cannot easily install the Hard Drive Upgrader on an original hard drive (as opposed to an upgrade disk), since the hardware compatibility for an original hard drive is limited. The reason for this is that the default partition table of a hard disk is often incompatible with a new hard disk. For example, a PC might have a single partitioned disk with C: as the system drive, and D: for data. If a user wanted to install a new hard drive with a larger capacity, it would be better to format a new drive, have data copied over, have the old drive removed, and then have the new drive installed. The Hard Drive Upgrader is designed for users who have such problems. It makes it possible for them to quickly replace the original hard disk with the new one, without having to reformat the old disk. The Hard Drive Upgrader supports Windows 95, Windows 98, Windows ME, Windows 2000, Windows XP, Windows Vista, and Windows 7 and Windows 8. Although the program does not copy all data from the original disk to the new one (this depends on the amount of available free space on the destination disk), it does make a backup of the original data files to an external storage device or hard disk.
