SkyGrabber Crack [Latest]

SkyGrabber Crack Free Download is an innovative application that helps satellite TV viewers to download and record free-to-air satellite TV programs directly to the computer. It can be used to download satellite Internet data from many different satellite Internet service providers, using a specialized USB receiver. SkyGrabber Cracked Version is based on a smart engine that accepts input from a satellite tuner card which will then be saved on the hard drive. Using it can bring various advantages, one of which can be recording various TV shows on your computer. By definition, it is an offline satellite downloader, meaning that an Internet connection is not required, but keep in mind that it only works with free-to-air satellite Internet data. SkyGrabber Full Crack requires specialized equipment in order to achieve its purpose; this includes a satellite dish, a KU-Band/C-Band LNB device and a DVB-S/DVB-S2 TV tuner. The list of supported tuners includes eight manufacturers, as follows: Azureware, TechniSat, TechnoTrend, DVBWorld, TBS/QBOX, TeVii, Genitech and GotView. If and only if the requirements stated above are fulfilled, the software will show its true colors. Simply customize your satellite dish in accordance with the selected provider and you can start grabbing content. In order to capture only data that is of interest to you, the application provides various filters that block out certain streams. There is a whole section dedicated to filtering alone and it comprises options to allow only the specified file types to be grabbed (media content, archives, etc), as well as possibilities to block out the specified IP or MAC addresses (or to allow content only from the specified IP and MAC address lists) or to filter by source ports. Ongoing downloads are listed in the main window of the software, but access to completed files is also granted. General statistics on CPU and memory usage, traffic and transfer rate are present in the lower side of the interface, at all times. On an ending note, SkyGrabber is an innovative software that, used for the right purposes, can help you take advantage of the satellite technology in a non-intrusive and user-friendly manner.
