If I have a standard UIView, I can call the methods like scale and translatesToInterfaceOrientation methods and everything works fine. But in a React component, none of these methods work. If I do this in the component: `componentDidMount() { view.scale = scaleFactor; }` Or this: `componentDidMount() { view.translatesToInterfaceOrientation = translatesToInterfaceOrientation; }` The component doesn't update. How can I get this to work? A: I had the same issue and found the answer here Using `import { scale, translatesToInterfaceOrientation } from "react-native";` did the trick for me. For some reasons using the standard scale/translate functions does not work as expected.
