Original AutoCAD 2.2 Review (1982) AutoCAD history AutoCAD is designed to be used by draftsmen who want to quickly create detailed, exact architectural drawings for residential and commercial construction. In 1982, AutoCAD was the first CAD product to be released commercially, and still the most widely used product in the industry today. When AutoCAD came out in 1982, it was a desktop application that ran on any one of several different microcomputers with built-in graphics hardware. This type of system allowed for the creation of very detailed 2D and 3D drawings. As technology advanced, more and more people adopted CAD technology and created drawings for home and commercial projects. CAD applications were also introduced for the IBM PC platform, and then later, the Macintosh platform. Eventually, other platforms like the Linux-based Unix, Windows, and even mobile platforms like iOS and Android were supported. To this day, AutoCAD is the most widely used CAD application. AutoCAD on the Macintosh AutoCAD is based on the same Windows application interface as other Microsoft products, such as Word, Excel, and Outlook. A version of AutoCAD also exists for the Mac, and it is used primarily by large commercial architectural firms. Its market share is growing, which means more and more people will be using it in the future. If you are considering buying a drawing package for your Macintosh, I recommend AutoCAD over Adobe Illustrator or CorelDraw. If you want to buy a desktop design package for your home and commercial projects, then I recommend AutoCAD over Civil 3D. AutoCAD is the only package that is truly cross-platform and will run on Mac, Windows, and Linux systems. The other packages are mainly desktop products and have not been built to work with cross-platform operating systems. AutoCAD development history In the early 1980s, the General Electric (GE) 1D modeling software was the only CAD product on the market. This is when John Walker, one of the AutoCAD developers, designed a version of the 1D drawing program that would work on the desktop and allow multiple users to work on the same drawing at the same time. This program, called Multiplan, could be run on all different platforms (which included Amiga, Apple II, Atari, IBM PC, and Unix). With the success of Multiplan, Autodesk decided to develop a similar product. Their idea was to create

In January 2016, Autodesk announced the release of AutoCAD LT 2017, which includes 3D modeling. As of August 2017, Autodesk released

AutoCAD LT 2018, a free version of AutoCAD that is available on Microsoft Windows and macOS, and that supports layers. In October 2017, Autodesk released AutoCAD LT 2019, the next iteration of AutoCAD that runs on Windows and macOS. The installer is not available on Windows, as the 2019 release is the first version to be available on Windows. A free trial version is available. AutoCAD LT 2019 is not backwards compatible with previous versions of AutoCAD LT. AutoCAD LT 2020 is available as a downloadable installer. Autodesk Architectural Design Suite Autodesk Architectural Design Suite (ADSU) is a suite of programs designed for architectural and interior design. The suite is available for purchase through the Autodesk Exchange. The first version of the software was released in 1999. Q: Why was my comment on a high-reputation question deleted? I answered a high-reputation question with a comment like the following: It might also be that you have a lot of menu and window focus on the screen. Go to System Preferences > Mission Control > Show all processes, and see what shows up on that list, and see if it is in the acceptable-set, or if it is in the unacceptable-set. It was flagged as "Not an answer" and was deleted. The whole point of that comment is to see if that can be the issue. What makes it not an answer? I know that it's not a direct answer to the question, but it's not a comment trying to solicit an answer. I am not trying to answer the question, I am just trying to point out that it might be a problem with focus, and I did not think I would get any trouble for that. I have no idea why it was flagged and deleted.

A: Comments are temporary. We delete them for a few reasons. One is when they don't seem to add anything to the question. Comments are not meant to be permanent. Also, there are so many comments, the place where you would want to leave a comment is the question itself. Comments are meant to add to the post, not to distract. (Also they aren't always read, which is why you can see deleted comments on some questions) You should not put something that could be interpreted as a personal attack in a comment. If your comment just flat out says you think the user is wrong, then that's fine, but if you think you can get them to see the error of their ways that would be too much. You should not be trying to answer the question in a comment. Comments are for information that doesn't belong in the question.
