To get an idea of the technological changes in the past 40 years that led to AutoCAD, a quick internet search for CAD applications will reveal that most of them are single-user, work on a single platform, and require hundreds of dollars in capital. AutoCAD 2019 was the first AutoCAD to break with those concepts, becoming the first AutoCAD to support external networks, multi-user workstations, and the cloud. A Brief History of Computer-Aided

Design In the late 1960s, Autodesk was a product design engineering company located in California. The company was sold to the Japanese machine tool and manufacturing company, Togo Precision in 1968. In 1968, the company was sold to American investor Warren Buffet and the name was changed to Rockwell International. Rockwell merged with Sperry Rand and ultimately merged with Burroughs. Burroughs went bankrupt, and Sperry Rand split from the company. After selling off many of its products, Rockwell was

liquidated in 1981. The history of computer-aided design goes back to the 1960s. The first commercial CAD program was released in 1968, and it was called CADAM, Autodesk's first customer program. This version was developed for the Burroughs 7060 minicomputer, and a company called APL (Automatic Production Line) made the minicomputer. CADAM was the first user-friendly CAD program, with a wizard that walked users through the processes of creating a model from a drawing, and the first CAD program with the capability to create 3D

models. Many CAD users today did not exist in the 1970s, and the earliest owners of Autodesk's CAD programs were engineers and architects who used CAD programs to design equipment like parts and machines. CADAM became the first high-end CAD application, but did not have the capabilities to design a whole project like a house or building. In the mid 1970s, Autodesk first introduced CADAM as a desktop application and released it for the Altair 8800 microcomputer. This was a much simpler platform than the Burroughs minicomputer, and when CADAM

was released for the Altair 8800, the price was less than \$1,000. In the 1980s, after Rockwell was sold to American investor Warren Buffet, the name was changed to Autodesk. The first version of Auto
