

Ipmi Interface Driver HP Proliant MI350 G6 64

Even after installing SPP, the device manager shows that the IPMI interface driver is not installed. This can mostly happen with G5 and G6 servers. In such a situation, there will be no hardware IPMI in the system. As shown in fig. 30.6, SPP driver driver support was added to address this issue. Rice. 30.6. Installing the IPMI Driver from the Command Line Using the SPP Driver You can now install the SPP driver using the driver install command. To install the SPP driver, enter the following command: \\installmount.log
