Have students review the methods and data presented in the exhibit. Through these exercises, students can familiarize themselves with some of the tools and procedures used in information technology auditing. A useful strategy for facilitating data collection, like the SURF and Site Checklists, also relies on the mapping of a Web site's collections to the identified information and privacy practices and preferences outlined in Exhibit 2. This strategy will be elaborated in a later section on Web site mapping. Student teams initially use a site survey and audit checklist to evaluate the information and privacy practices of a Web site. Next, they map the Web site's information collections to the assigned practices and preferences. Finally, they use a two-step mapping process to compare the Web site with the collector's information practices and preferences. You may want to apply the mapping strategy in a variety of ways to determine how it can be used to further your students' understanding of the auditing process. Some questions to consider are the following: What type of information does the site collect? What is the level of data processing? How is data processed? Where is data processed? and Where will data be stored? What information collection practices and preferences are identified? What methods will be used to collect data and view a site? Are there any special security considerations? Students can present their findings as a show and tell or as a presentation. Hall Solutions Manual. John Wilder. This book examines various and unprecedented pressures related to the use of information technology in the information management (audit) process. 7/6. Solution Manual.

Free Download Information Technology Auditing And Assurance Solutions Manual James Hall Pdf

Information Technology Auditing James A. Hall 2011-12-20 How will you know when you don't know what you don't know?
