Add your own custom tile design and make a masterpiece without even knowing how! Procedural Tilemap Generator is the unique and revolutionary app that allows you to create your very own tiles based on pre-set tiles. Using "Procedural Tilemap Generator" you can create perfect and extraordinary maps for your world, project, or whatever you have in your head. Take the world as your canvas, or even create a concept for your future project. The possibilities are endless and they are all based on your imagination, which is one of the best things that can be put into a creative app. To be able to create your very own tiles and use them in your map designs, you only need to do is to draw a few lines and add some colors, which is really easy. With this tool, you can create tiles based on the ones that you already have, but don't like anymore. You can use these tiles to create a variety of cool maps that can be used in movies, books, online games or whatever you can think of. This is especially beneficial to people that can't code or are not technically inclined in any way. You can use your own tile art, vector, or even your own hand drawn tiles. You can also design and create your own tiles. There is really no limit to what you can do and what your imagination can create. The interface of "Procedural Tilemap Generator" is simple and easy to follow. Just draw a few lines and colors and your tile will be ready to be used. It is really easy and really fun. What's New in the?

Procedural Tilemap Generator is an easy to use, program that allows users to create maps. These tiles are like bricks put together. They can either be set up by the application through your choices or created to your specifications with

your artistic contribution. Either way, the results are spectacular, and the best part is there is no coding involved, just artistic sense and spirit. Interface Having been created with the Unity engine, the application boasts a simple and effective interface. For one, every setting or option is neatly placed on the screen. The descriptions before any choice is made are complete and easy to understand. The developer guides the user step by step and helps them, at the same time, make the right choice according to their needs and wants. The end result can either be exported or discarded. If you already have some work done, why not import it and continue from where you left off. Functionality As far as functionality is concerned, one can create as many maps as they like, and the uses could be plenty, from picturing an idea or concept more vividly, to adding the result as the missing element in a book or movie setting. The maps could easily be integrated into a game as well. It all boils down to what the user wants exactly. Adding your own tile design improves the app's functionality by making it a tool in creating something even more original than before. It is like a blender that mixes the ingredients you put in. Procedural Tilemap Generator comes and mixes all the tiles you upload and then randomly combines them to form an authentic map looking design. The bottom line is that with Procedural Tilemap Generator you get to experience the wonderful world of digital creation without the need to code or know complicated programming procedures. You simply design, add your favorite mix, and voila! You are done.Can the Rotating Scaffold and Powered Scaffold Achieve Pain-Free and Safe Implantation in Minimally Invasive Spine Surgery? Retrospective case-control study. The aim of this study was to compare pain perception, length of surgery, and safety of the standard and the rotating scaffold in performing minimally invasive surgery (MIS) for degenerative spine

disorders. MATERIAL AND METHODS: Between January 2014 and December 2016, a total of 250 consecutive patients were included in this study. They were randomly allocated into 2 groups: 100 patients were operated using the conventional (CS) system and 150 patients were operated with the rotating (RS) system. The CS group was matched with the RS group using the following parameters: gender, age, and the types of degenerative spine diseases (spondylolisthesis, lumbar spinal stenosis, and degenerative scoliosis). The NRS of 1 to 10, dEQ5-5, and dEQ5-10 of the short-form McGill Pain Questionnaire were used to evaluate
