HDR Photography is one of the latest feature of Photoshop. With HDR, you don't have to limit yourself to natural light. It allows you to experiment with any light you find yourself in or experiment with the different light sources, whether they are window light, candle light, flash, sunset. You can capture different kinds of light sources for a shot you want to take. And once you are done tweaking your images, you can easily adjust them and save all your edits. If you're a fan of taking outdoor photography, HDR is a great tool for you. Photoshop has received a few welcome updates for 2018, with Flat Design being just one of them. Flat Design is a form of minimal design which removes the use of gradients, drop shadows, and other visual effects so as to give clean and simple graphics. You will see a new icon set, more consistent colors, and a high-contrast mode for photos. If you're not a fan of Flat Design, you'll be able to toggle this off and have a traditional experience. Inversion is a new feature in Photoshop that lets you flip horizontally or vertically. The image flips 180 degrees when you press on the flip button. If you need to flip a photo so that its content is displayed vertically, invert the photo using Inversion. The new Lens Correction feature in Photoshop CC learns repetitive structures of the objects in your images. Whether you shoot with a wide angle or a super-zoom camera - this frustratingly limited feature can fix some of the quirks that come with these types of cameras. The Lens Correction feature can remove chromatic aberration from your photos and correct problems such as coma and barrel distortion. It needs a few shots to do that.
